

STEPHANIE DOMAS

ADVISOR BIOGRAPHY

While Stephanie enjoys her current role as Chief Security Technology Strategist for Intel, she as much enjoys advising companies going through a security journey. She is a fearless thinker, smart, sharp, and adept at understanding, integrating and applying key security ecosystem insights and considerations into a robust strategic planning process.

Stephanie's advisory focuses on two main areas: Strategic buildout of go to market for a security product. Or, bringing security programs and robustness to any technology-based product.

She is consistently under several advising contracts and understand the unique complexities of her dual roles and the confidentiality that come with them.

As an advisory for security products go-to-market, Stephanie guides the development of go-to-market plans spanning the identification of target industries, appropriate business models, voice of customer strategy, and product marketing strategies.

As an advisor on product security (security assurance) Stephanie guides the creation or maturation of a product security strategy to meet leading industry best practices and customer expectations. Spanning business best practices as well as technical processes and documentation.

Stephanie's extended biography is attached.

“Stephanie not only simplified the complexity of our ecosystem for leadership, she helped my executive team to understand the emerging trends and future needs of cybersecurity for that ecosystem. Obtaining executive team buy in to understand cybersecurity risk was no easy feat, but Stephanie built trust with the leadership and technical teams and helped align the needed product cybersecurity capability to the organizations goals”

Product Security Director – Chief Security Architect

“One of the reasons why we engaged Stephanie, as a consultant, in our current project was her impressive technical expertise paired with a rare talent to transport such complex skills to other developers or stakeholders. As Stephanie had never any contact to our very specific products, it was impressive to see how quick she understood our situations and her ability to get familiar with the new technology to better address our issues or find the best source for certain concerns. Stephanie became an important advisor for our current and future directions in the field of cybersecurity”

Global Head of Clinical IT

STEPHANIE DOMAS

ADVISOR BIOGRAPHY

The first ten years of Stephanie's career began with a focus on ethical hacking, reverse engineering, and advanced vulnerability analysis as a defense contractor, building a deep knowledge and passion for the hacker mindset.

Stephanie later pivoted her offensive skills to the defense building and leading two cybersecurity businesses focused on defense of embedded systems, medical devices and the healthcare industry.

She serves as a prominent industry consultant and advisor with a broad range of tech companies and device manufacturers, from the newest startups to the industry giants.

Stephanie is currently the Chief Security Technology Strategist for Intel where she owns the cross-Intel security technology strategy, formulating and implementing strategies that will accelerate Intel's strength, competitiveness, and revenue growth in the area of Security, spanning hardware such as processors, graphics, networking, memory, but also software and security solutions. While she has a front seat to the most significant trends and developments in technology as an executive at a top 10 tech company, she is as equally passionate educator, strategist, speaker, advisor, and all things security enthusiast.

She is a native of Columbus, graduate of The Ohio State University and is married to another ethical hacker, with whom she has 4 children. They reside in Newark, Ohio.

"Members of the medical device community, including CISO's and product security engineers that work for the world's largest medical device companies, consider Stephanie a leading expert on the issue. These individuals regularly seek Stephanie's advice and services to develop better cybersecurity controls for their products and systems"

VP Technology and Regulatory Affairs

"Stephanie is hands down the top global technical leader on medical device security"

Director of Device Security

"She is engaging and able to present complex information to a wide range of audiences. She excels at identifying the challenges and providing workable solutions, for example, helping device manufacturers understand how to develop a road map to incorporate threat modeling as part of the device development lifecycle and providing a roadmap to secure devices"

Head of Security Department
